

Improving Your Bottom Line Rehabilitation Auditing

Rehabilitation Auditing is just one of the services provided by the Rehabilitation and Soils Unit.

Rehabilitation auditing is vitally important to the rehabilitation and closure process, providing the means to determine the effectiveness and efficiency of the current rehabilitation methods.

It allows the identification and correction of shortfalls and unsuccessful practices early in the closure process, thereby improving rehabilitation and reducing costs. Digby Wells has a dedicated team to ***“Improve your bottom line, both on the ground and in your financials”***.
